

FOR IMMEDIATE RELEASE

IHH Healthcare Malaysia Pioneers the Use of Solar Power Across Its Entire Hospital Network

IHH Healthcare Malaysia currently has eight hospitals running on solar power as part of its commitment towards reducing its carbon footprint

KUALA LUMPUR, 29 April 2024 – IHH Healthcare Malaysia today marked a new milestone by launching a comprehensive renewable energy initiative across its network, becoming the pioneer private healthcare provider in the country to transition to solar power by installing solar panels at its hospitals.

This event was officiated with the energisation of Prince Court Medical Centre's solar panels by **Yang Amat Berhormat Dato' Sri Haji Fadillah bin Haji Yusof, Deputy Prime Minister of Malaysia and Minister of Energy Transition and Water Transformation (PETRA)**.

Dato' Sri Haji Fadillah said, "IHH Healthcare's initiative is a significant milestone towards Malaysia's commitment to sustainability and renewable energy. It aligns perfectly with our national goals to increase the use of renewable energy and achieve net-zero greenhouse gas emissions by 2050. This project serves as an inspiring model for other sectors to emulate."

The renewable energy initiative undertaken by IHH Healthcare Malaysia is in line with Malaysia's goal to reduce its dependence on fossil fuels and contribute to global initiatives against climate change.

Other IHH Healthcare Malaysia hospitals with energised solar panels include Gleneagles Hospital Penang, Pantai Hospital Laguna Merbok, Pantai Hospital Klang, Pantai Hospital Cheras, Pantai Hospital Kuala Lumpur, Pantai Hospital Ampang and Pantai Hospital Batu Pahat.

Jean-François Naa, Chief Executive Officer of IHH Healthcare Malaysia said, "As one of the largest healthcare providers in the country, we acknowledge that energy consumption is our largest source of direct greenhouse gas emissions, accounting for over 75% of our carbon footprint. With the installation of solar panels across our network of hospitals encompassing Gleneagles Hospitals, Pantai Hospitals, Prince Court Medical Centre and Timberland Medical Centre, we are able to transition to renewable energy and reduce our greenhouse gas emissions. This is all part of our broader commitment to *Care. For Good.* – by providing quality care and service to our patients while also contributing towards environmental conservation."

Full rollout of solar power across IHH Healthcare Malaysia hospitals is expected to be completed by 2025. This initiative is a strategic partnership with Ditrolic Energy, one of the largest renewable energy developers in Malaysia and Southeast Asia.

Beyond energy transition, IHH Healthcare Malaysia is committed to waste management and energy efficiency initiatives for the good of the planet. IHH Healthcare Malaysia also comprehensively addresses its other core sustainability pillars encompassing patients, people and the public through initiatives such as antimicrobial stewardship, service excellence and upholding clinical quality to the highest standards. These efforts align with United Nations Sustainable Development Goals.
